 IDENTIFIERS *Appalachia; North Carolina

ABSTRACT

A survey of high school juniors and seniors in areas served by members of the Appalachian Developing Institutions Consortium was conducted to: (1) discover the kind of image each consortium institution had with these students; and (2) obtain information on these students' backgrounds and educational plans to assist administrations in establishing productive communication, to aid in recruitment and program planning, and to increase the accuracy of enrollment predictions and estimates of space needs. Questionnaires were administered to more than 12,300 students. A ten percent random sample was used for analysis. Consortium findings and conclusions for each item on the questionnaire are included. Criticism (by the research coordinators) of the strengths and weaknesses of the study's design and administration and the exclusion or modification of questions is provided. Tables of the data collected are presented in Appendix A. Appendix B is a copy of the questionnaire. (KM)

STATEMENT OF ACKNOWLEDGMENT

The personnel of the Appalachian Developing Institutions Consortium would like to express appreciation for the cooperation of the public school officials from the North Carolina county and city administrative units which have participated in the study. We would also like to convey our thanks for the cooperation the research group received from the school guidance counselors. The list of county and city school units with the names and titles of the respective school officials, who did so much to make the results of this study possible, has been presented below.

OFFICIALS OF THE PUBLIC SCHOOLS THAT PARTICIPATED WITH ASHEVILLE-BUNCOMBE TECHNICAL INSTITUTE IN ADMINISTERING THE HIGH SCHOOL IMAGE STUDY

<u>Public Schools</u>	<u>Names</u>	<u>Titles</u>
Asheville City Schools	Mr. W. T. Griffin	Superintendent
Asheville High School	Mr. Clark Pennell	Principal
Buncombe County Schools	Mr. Fred H. Martin	Superintendent
A. C. Reynolds High School	Mr. R. L. Dalton	Principal
Charles D. Owen High School	Mr. Charles A. Lytle	Principal
Clyde A. Erwin High School	Mr. Leon Hall	Principal
Enka High School	Mr. W. E. McElrath	Principal
North Buncombe High School	Mr. Edwin McDevitt	Principal
T. C. Roberson High School	Mr. Charles T. Koontz	Principal
Madison County Schools	Mr. Robert L. Edwards	Superintendent
Marshall High School	Mr. Clive Whitt	Principal
Mars Hill High School	Mr. Fred Dickerson	Principal
Hot Springs High School	Mr. Bruce Phillips	Principal
Laurel High School	Mr. Ray Tweed	Principal
Spring Creek High School	Mrs. Jewell Church	Principal

OFFICIALS OF THE PUBLIC SCHOOLS THAT PARTICIPATED WITH CALDWELL COMMUNITY COLLEGE & TECHNICAL INSTITUTE IN ADMINISTERING THE HIGH SCHOOL IMAGE STUDY

<u>Public Schools</u>	<u>Names</u>	<u>Titles</u>
Caldwell County School System	Mr. E. M. White	Superintendent
Lenoir City School System	Mr. J. G. Hagaman	Superintendent
Gamewell-Colliettsville High School	Mrs. Janice Lail	Acting Principal
Granite Falls High School	Mr. Bill Metcalf	Principal
Hudson High School	Mr. Henry Latham	Principal
Hibriten High School	Mr. Kenneth Roberts	Principal
Lenoir High School	Mr. John Scott	Principal

OFFICIALS OF THE PUBLIC SCHOOLS THAT PARTICIPATED WITH
HAYWOOD TECHNICAL INSTITUTE
IN ADMINISTERING THE HIGH SCHOOL IMAGE STUDY

<u>Public Schools</u>	<u>Names</u>	<u>Titles</u>
Haywood County Schools	Dr. W. T. Bird	Superintendent
Pisgah High School	Mr. Clark Morton	Principal
Tuscola High School	Mr. Leonard Gardner	Principal

OFFICIALS OF THE PUBLIC SCHOOLS THAT PARTICIPATED WITH
ISOTHERMAL COMMUNITY COLLEGE
IN ADMINISTERING THE HIGH SCHOOL IMAGE STUDY

<u>Public Schools</u>	<u>Names</u>	<u>Titles</u>
Rutherford County Schools	Mr. Forrest Hunt	Superintendent
Alexander Schools	Dr. John Vogler	Principal
Central High School	Mr. Z. E. Dobbins	Principal
Chase High School	Mr. W. T. Lewis	Principal
East Rutherford High School	Mr. O. W. Morris	Principal
Tryon City Schools	Mr. Vernon L. Dusenbury	Superintendent
Tryon City High School	Mr. Elmo F. Neal	Principal
Polk County Schools	Mr. David Cromer	Superintendent
Polk Central High School	Mr. Carthon Hinson	Principal
Saluda School	Mr. Jerry Russell	Principal

OFFICIALS OF THE PUBLIC SCHOOLS THAT PARTICIPATED WITH
SOUTHWESTERN TECHNICAL INSTITUTE
IN ADMINISTERING THE HIGH SCHOOL IMAGE STUDY

<u>Public Schools</u>	<u>Names</u>	<u>Titles</u>
Jackson County Public Schools	Mr. Paul Buchanan	Superintendent
Macon County Public Schools	Mr. Kenneth Barker	Superintendent
Swain County Public Schools	Mr. Tommy Woodard	Superintendent
Cherokee Indian Schools	Mr. Ray Cleaveland	Superintendent
Highlands High School	Mr. Stoney Hinkle	Principal
Camp Lab School	Dr. Arthur Justice	Principal
Glenville High School	Mr. Franz Whitmire	Principal
Sylva-Webster High School	Mr. Ray Simpson	Principal
Nantahala High School	Mr. Lonnie Crawford	Principal
Franklin High School	Mr. Charles Frazier	Principal
Cherokee High School	Mr. Howard Patton	Principal
Swain High School	Mr. Clifford Frizzell	Principal

OFFICIALS OF THE PUBLIC SCHOOLS THAT PARTICIPATED WITH
WESTERN PIEDMONT COMMUNITY COLLEGE
IN ADMINISTERING THE HIGH SCHOOL IMAGE STUDY

<u>Public Schools</u>	<u>Names</u>	<u>Titles</u>
Burke County Public Schools	Dr. Charles Weaver	Superintendent
Drexel High School	Mr. Walter Hood	Principal
George Hildebran High School	Mr. Evan Rhoney	Principal
Glen Alpine High School	Mr. E. M. Jenkins	Principal
Hildebran High School	Mr. Zeno Crump	Principal
Morganton High School	Mr. Bill Babb	Principal
Oak Hill High School	Mr. Bill Brown	Principal
Salem High School	Mr. Alton Horton	Principal
Valdese High School	Mr. James Draughn	Principal

OFFICIALS OF THE PUBLIC SCHOOLS THAT PARTICIPATED WITH
WILKES COMMUNITY COLLEGE
IN ADMINISTERING THE HIGH SCHOOL IMAGE STUDY

<u>Public Schools</u>	<u>Names</u>	<u>Titles</u>
Wilkes County Schools	Mr. Wayne Bradburn	Superintendent
Wilkes County Schools	Mr. Rex W. Whittington	Associate Superintendent
North Wilkesboro Schools	Mr. John Deason	Superintendent
North Wilkes High School	Mr. Paul Gr gory	Principal
East Wilkes High School	Mr. Eugene Reavis	Principal
West Wilkes High School	Mr. E. H. Greene, Jr.	Principal
Wilkes Central High School	Dr. John Preyer	Principal
Allegheny County Schools	Mr. John Woodruff	Superintendent
Allegheny High School	Mr. John Greene	Principal
Ashe County Schools	Mr. Frank James	Superintendent
Ashe Central High School	Mr. Charles E. Abee	Principal
Northwest Ashe High School	Mr. F. L. Barker	Principal
Beaver Creek High School	Dr. Paul Bingham	Principal

REPORT ON THE SURVEY OF HIGH SCHOOL STUDENTS'

EDUCATIONAL PLANS AND OPINIONS

RELATING TO THE AREA TWO-YEAR INSTITUTIONS

Introductory Remarks: Information on the Consortium
Organization and Research Activities

This consortium of eight "open-door" two-year institutions in the North Carolina Appalachian Region was, in November of 1970, funded under Title III of the Higher Education Act. This cooperative arrangement which has the official title of APPALACHIAN CONSORTIUM SPECIAL DEVELOPMENT PROJECT began the operations on July 2, 1971.

Consortium research activities have been conducted under the auspices of two committees. An Executive Committee, composed of institutional members with Dr. William Richardson presiding as chairman, has been responsible for decision-making regarding the cooperative research projects. A second committee, the Research Coordinating Committee, has been charged with conducting all research, planning, and development activities. At each of the consortium institutions, a Research Coordinator, who served on the Research Coordinating Committee, has participated in the development and administration of the high school study instrument, the establishment of reporting procedures, and the preparation of the final report on the high school students educational plans and opinions.

Before proceeding with the explication of the study developments and results, the members of the consortium would like to convey some information concerning (1) the overall plan for consortial activities and (2) the goal of cooperative research for program development and evaluation.

Overall plan for consortial activities. The development of consortial activities has been controlled by a three year plan. The plan stipulates that during the first year, 1971-72, basic research is to be conducted in relation to short and long-range program planning and evaluation. In the second year, 1972-73, programs are to be implemented and evaluated with results being disseminated to all persons and agencies that have been concerned with the upgrading of the educational process in the consortium community colleges and technical institutes. During the third year, 1973-74, the previously implemented program activities are to be further evaluated and -- where it is considered necessary -- revised. At the end of three years, the results of consortium activities will appear in "final" reports. However, if the personnel maintain the interest and dedication they have exhibited during this first year of operation, the participating institutions will continue this cooperative arrangement for years to come.

To conduct self-studies and to coordinate consortium-wide research, each institution has established either a full or part-time research coordinator's position. These researchers act as liaison persons between their institutional study groups and the coordinating efforts of the Chairman of the Executive Committee whose office is at Wilkes Community College and the consortium Research Coordinator whose office is located at Appalachian State University.

Appalachian, as an assisting institution, has its Director of Institutional Research serving as a member of the Executive Committee, its faculty in the College of Education serving as consultants, its systems analysis staff involved in implementing management information techniques in the developing institutions, and its University Statistician giving consultation on analyses. Appalachian's other commitments have included coordinating efforts in preparing consortium study instruments, conducting surveys, and analyzing results.

Cooperative research for program development and evaluation. The 1970-71 proposal indicated that key personnel in the community colleges and technical institutes formed the consortium because they recognized the following facts:

1. Each institution has in its area the greatest potential to implement North Carolina's "open door" policy and, thus, to reach out and educate the populace in its region.
2. Only through a cooperative arrangement could the institutions overcome limitations arising from a base of low taxable resources and thus from inadequate funding for necessary research, planning, and evaluation.
3. All the institutions have the same basic needs for effective development: the creation of research models and acquisition of data for institutional improvement; the upgrading of administrative and instructional staff; the increasing and enhancing of curricula and curriculum materials, especially for economically deprived and slow learners; the selecting of appropriate consultant assistance; and the need for immediate and long-range planning.
4. The eight institutions are developing and need assistance for community-based program planning and evaluation, if they are to provide more and better services to all persons in their respective service areas.

Consortium members have recognized the need for both individual and consortium-wide community based program development, implementation, and evaluation. Personnel in each institution have committed themselves to establishing, as an extension of the 1970-71 proposal objectives, program objectives related to the following priority research/study areas that have been determined by the Executive Committee: comprehensive community survey, business-industrial survey tied to the community survey, development of student profile data and a management information system to exchange aggregated results, follow-up studies of alumni and especially "dropouts," and image studies -- especially a high school image study -- to acquire estimates of the way programs and

services are received in the respective communities. All program development has been based on cooperative research effort, aimed at either educating or training the low-income and educationally deprived student, hoping to improve the quality of life in Appalachia.

Purposes, Development, and Administration of the Study

The paragraphs that follow contain background information concerning the survey of the "High School Students' Educational Plans and Opinions." The information includes the purposes and objectives of the study, the activities related to the development and pilot testing of the study instrument, and the administration of the instrument.

Purposes and objectives of the study. The survey had two purposes: (1) to discover what kind of image each consortium institution had with high school juniors and seniors and (2) to obtain information on high school students' backgrounds and educational plans. Though these purposes could also be interpreted as the overall goals for the high school image survey, the researchers identified, additionally, other uses for the survey and then transposed these uses into the following objectives.

1. To assist the administrators and personnel of the community colleges and technical institutes in their attempts to establish productive communications between themselves and the high school students in the service areas.
2. To aid the recruitment efforts by examining the images that the community colleges and technical institutes have among high school students and by evaluating the students' aspirations in terms of the two-year institutions' education/training programs.
3. To develop, from the high school students' educational plans and opinions, data elements that would, through comparison with

business-community survey results, have implications for immediate and long-range program planning.

4. To increase the accuracy and thoroughness with which institutional personnel predict enrollment in programs and estimate space utilization needs.

Development and pilot testing of the study instrument. In building the instrument and writing the questions for this survey, the research group worked toward achieving the above stated objectives. The first page of the instrument was designed so that it could be detached and used for recruitment and other purposes by the personnel in the two-year institutions. However, the consortium institutions had the option of inputting the data elements in the PERSONAL INFORMATION section into a data processing system. The important items in this section included student name, age, sex, name of high school, county, home address and phone, educational experience of parents or guardian, and post-high school plans.

When the research coordinators attempted to obtain occupational and career information pertaining to the high school students and their parents, they could discover, after reviewing other survey documents, no concise occupational array that could be used by students in selecting preferred job and career areas. Accordingly, the group identified twenty-five occupational areas that served the purpose of the study, and then they devised an alpha code for each area. For example, the agricultural occupations were listed as farming, food processing, horticulture-landscaping and greenhouses, and governmental ag-agencies. This category was then designated by the alpha codes [AG] for agriculture. The use of this occupational array provided an opportunity for high school students to quickly identify parental occupations and their career choices.

The job and career choices relating to general occupational areas were to be contrasted with student "Program Choices." Each research coordinator in the two-year institutions prepared a listing of the programs currently being offered. This sheet was placed within the instrument -- this one is of bifold design -- so that students could "pre-register" at the community college and/or technical institute in his/her area.

The high school image questions and statements relating to student educational plans included items, e.g., that requested students to describe their feelings about the two-year institution, rate the quality of the institutions, identify the media that brought community college and technical institute information to their attention, and identify the grade averages earned in high school.

The plans for administering the study included pilot testing the instrument in a high school in the Haywood Technical Institute service area. It was found that the average time required to answer the questionnaire was under twenty minutes. The students indicated that they found the line-of-questioning to be relevant and the questions themselves to be clearly written and understandable. This high school student pilot group expressed its appreciation of Haywood Tech, indicating that the institution had an excellent reputation. Haywood personnel, however, discovered, even in the pilot study, that liaison between themselves and the high school students could be improved.

Administration of the study instrument. The procedures for the high school image survey require consortium personnel to preside over administering of the instrument in the high schools. All juniors and seniors in the service areas were asked to complete the questionnaires. The completed forms will be utilized by various agencies in the community colleges and technical institutes.

Sampling procedures have been established and applied to the responses. Plans were made to tally and analyze so that each high school would also profit from having students participate in the study.

The high school study instrument was administered by the research coordinators during the months of January, February, and March. A copy of the instrument may be found in Appendix B.

High school populations in the study. The study populations were composed of junior and senior students attending the high schools in each two-year institution's service area. The numbers of questionnaires administered were, approximately, as follows: 4,424 in the Asheville-Buncombe Technical Institute area; 1,378 in the Caldwell Community College and Technical Institute area; 1,030 in the Haywood Technical Institute area; 1,522 in the Isothermal Community College area; 1,040 in the Southwestern Technical Institute area; 1,261 in the Western Piedmont Community College area; and 1,655 in the Wilkes Community College area. The approximate total number of students participating in the study was 12,310.

Sampling and analyses procedures. In regard to sampling and analysis procedures, the researchers held the following considerations to be applicable.

1. Consortium sample population. The application of sampling and analyses procedures to the responses to survey questions included the identification of a sample population. Since there was among the instrument questions no reference to test scores or other ranges that could be used to calculate an initial sample population size n , the research coordinators selected as large a sample size as time and money would permit--a ten percent sample from the instruments administered to all the junior/senior students in the study population (P). The consortium sample population was

randomly selected. To accomplish randomization, the researchers numbered the instruments, and then by using The Rand Corporation's A Million Random Digits, they drew random numbers which were used to select questionnaires having identical numbers. The sampling was also proportionate, i.e., each high school population had ten percent of its student questionnaires included in the population. The findings and conclusions of the study were based upon this consortium sample population.

2. Returns to high schools having less than 250 students. It was acknowledged that high schools having small populations would not be equitably treated if they received tallies of responses on ten percent of their populations. Therefore, in addition to the ten percent random sample of instruments drawn from each high school population, tallying of responses was also done for the complete number of instruments collected from high schools having populations of less than 250 junior and senior students.
3. Relationship between sample and complete populations. It was assumed that the composition of students, in regard to their aspirations and attitudes, in the sample population approximated the composition of such qualities belonging to students in the complete population. Assuming that the responses of students in the ten percent population are, proportionately, similar to responses of students in the complete population, the tallies of responses from the ten percent sample population may be multiplied by ten. Accordingly, if twenty-three tallies have been recorded for a given response category, then the number of students in the total population who would have selected the same response category would be approximately 230.

INTRODUCTION TO FINDINGS AND CONCLUSIONS

For each of the seven two-year institutions participating in the study, findings and conclusions were developed. While these individualized findings and conclusions are not included in this document, the consortium findings and conclusions, based on a ten percent sample of all high schools in the study, have been listed in this section according to the sequence of questions 1-21 in the "High School Students Educational Plans and Opinions" survey instrument. The findings and conclusions are supported by the data derived from the responses to questions 1-21 in the instrument. These data, with the exception of those to question 18 for which there are no findings or conclusions,¹ appear in Tables 1-17 and 19-21. The data concerning the responses to the PERSONAL INFORMATION question regarding students' post high school plans may be found in Table 22. Tables 1-17 and 19-22 have been placed in Appendix A.

Xeroxed copies of the computer printout or "List Tally" which has the record of responses from seven sample populations, composed of 10% of the students from each two-year institution's service area, are upon request available from the Appalachian State University Office of University Research Services. While Tables 1-17 and 19-21 (noted above) contain the responses to all but a few of the instrument questions, the printout includes student

¹In regard to Question 18, students responded to a coded list of institutional programs -- a list individualized to carry the program of the consortium institution administering the instrument. Students indicated their first and second program choices and these responses appear in the computer printout which is available upon request from the Appalachian State University Office of University Research Services.

responses to each query in the survey instrument. Therefore, if planners or counselors at either the two-year institutions or the high schools wanted information on the educational level of parents or guardians, or if they wanted to analyze all the data to multiple response questions, they found these data tallied and recorded in the printout.

While the individualized findings and conclusions for each two-year institution have not been included in this document, the findings and conclusions for the consortium are presented on the next page.

CONSORTIUM FINDINGS AND CONCLUSIONS

The findings and conclusions concerning student responses to statements in the high school image questionnaire are as follows:

Question 1: "Note the occupational items and then, using codes (AG, etc.), indicate career choices."

Finding: Seven occupational items received the largest number of student responses. The frequencies and percentages of student responses for these items have been rank ordered, from highest frequency/percentage to lowest, as follows:

- professional, obtaining 177 responses or 14%;
- secretarial-commercial, obtaining 146 responses or 12%;
- health services and social work, obtaining 133 responses or 11%;
- business, obtaining 67 responses or 6%;
- auto mechanics, obtaining 57 responses or 5%;
- engineering, obtaining 54 responses or 4%; and
- building-construction, obtaining 53 responses or 4%.

The total number of responses to the question was 1048.

Conclusion: Students showed a preference for the occupational items: professional, secretarial-commercial, health services and social work, business, auto mechanics, engineering, and building-construction.

Question 2: "Which of these items best describes your educational plans?"

Finding: Four educational plan items received the largest number of student responses. The frequencies and percentages of student responses for these items have been rank ordered, from highest frequency/percentage to the lowest, as follows:

- graduate from a 4-year college/university, obtaining 390 responses or 32%;
- graduate from a community college or technical institute, obtaining 349 responses or 28%;
- graduate from high school only, obtaining 270 responses or 22%; and
- graduate from a two-year junior college, obtaining 104 responses or 8%.

The total number of responses to this question was 1230.

Conclusion: A majority (60%) have post high school educational plans for attending a four-year institution or a two-year community college and/or technical institute.

Question 3: "I have heard my friends say this institution is --"

Finding: Four reputational rating items received the largest number of student responses. The frequencies and percentages of student responses for these items have been rank ordered, from highest frequency/percentage to lowest, as follows:

good, obtaining 755 responses or 61%;
 excellent, obtaining 205 responses or 17%;
 don't know, obtaining 170 responses or 14%; and
 never heard of institution, obtaining 64 responses or 5%.

The total number of responses to the question was 1230.

Conclusion: A substantial majority (78%) of the students rated the reputation of the institution as good or excellent. A minority (19%) either did not know the reputation of the institution or had never heard about the institution.

Question 4: "Check all the items which best describe your feelings about going to this institution when you finish high school."

Finding: Remember that all students in the population could check each of the ten response items so that the possible number of responses to any item would be a percentage of a total of 1230. For a check-all-items type of question, the sums of percentages may equal more than 100%.

Five response items, concerning students' feelings about attending the institution, received the largest number of student responses. The frequencies and percentages of student responses for these items have been rank ordered, from the highest frequency/percentage to the lowest, as follows:

"I plan to continue my educational training beyond high school but not at this institution," obtaining 406 responses or 33%.
 "My parents are encouraging me to get educational training beyond high school," obtaining 265 responses or 22%;
 "I would like to go beyond high school but will need to work," obtaining 253 responses or 21%;
 "After high school, I plan to attend this institution," obtaining 200 responses or 16%; and
 "I don't know much about what courses and programs are offered at this institution," obtaining 152 responses or 12%.

Conclusion: A conclusion to this kind of check-all-items question must remain tentative; however, it would appear that (1) a proportion [33%] of the population do not plan to attend this two-year institution, (2) a proportion [22%] of the population was composed of students who had received parental encouragement in regard to attending the institution, and (3) a proportion [21%] of the population would need employment or financial aid if plans to attend the institution materialized.

Question 5: "Is this institution more or less expensive to attend than the four-year colleges?"

Finding: Two response items received the largest number of student responses. The frequencies and percentages of student responses for these items have been rank ordered, from the highest frequency/percentage to the lowest, as follows:

less expensive, obtaining 775 responses or 63% and
don't know, obtaining 445 responses or 36%.

The total number of responses to the question was 1230.

Conclusion: A majority (63%) of the students knows that attending the two-year institution is less expensive than a four-year institution; however, a proportion (36%) of students indicated that they did not know the difference in the costs for attending two-year and four-year institutions.

Question 6: "What was your major course emphasis in high school?"

Finding: Each of the course emphasis items received a proportion of the student responses. The frequencies and percentages of student responses for these items have been rank ordered, from the highest frequency/percentage to the lowest, as follows:

college preparatory, obtaining 498 responses or 40%;
general education, obtaining 342 responses or 28%;
business vocational, obtaining 238 responses or 19%; and
technical vocational, obtaining 152 responses or 12%.

The total number of responses to this question was 1230.

Conclusion: The separation of students into four course/program areas has been quantified.

Question 7a: "Your grades in high school have been close to --"

Finding: Three grade evaluation items received the largest number of student responses. The frequencies and percentages of student responses for these items have been rank ordered, from the highest frequency/percentage to the lowest, as follows:

grade C, obtaining 540 responses or 44%;
grade B, obtaining 462 responses or 38%; and
grade A, obtaining 135 responses or 11%.

The total number of responses to the question was 1230.

Conclusion: A majority (93%) of the students received average or better grades.

Question 7b: "And you would consider your grade average good enough to attend this institution."

Finding: One thousand and thirteen or 82% of the students replied in the affirmative, while 217 students or 18% answered in the negative.

The total number of responses to the question was 1230.

Conclusion: A majority (82%) of the students believed their grade averages were good enough to attend the institution.

Question 8: "Have you been informed by representatives of this institution about programs and offerings?"

Finding: Seven hundred and seventy or 63% of the students replied in the negative, while 460 or 37% of the students answered in the affirmative.

The total number of responses to this question was 1230.

Conclusion: In a majority (63%) of cases, students have not been informed about programs and offerings by representatives of the institution.

Question 9: "Indicate the high school person who has most strongly suggested that you attend this institution."

Finding: Four items received the largest number of responses. The frequencies and percentages of student responses for these items have been rank ordered, from the highest frequency/percentage to the lowest, as follows:

no high school person, obtaining 742 responses or 60%;
friend, obtaining 237 responses or 19%;
counselor, obtaining 160 responses or 13%; and
teacher, obtaining 67 responses or 5%.

The total number of responses for this question was 1230.

Conclusion: A majority (60%) of the students have not been influenced by high school persons to attend this institution.

Question 10: "What is your employment situation?"

Finding: The students responded to three items. The frequency and percentages of student responses for these items have been rank ordered, from the highest frequency/percentage to the lowest, as follows:

not employed, obtaining 757 responses or 62%;
employed part-time, obtaining 396 responses or 32%; and
employed full-time, obtaining 77 responses or 6%.

The total number of responses for this question was 1230.

Conclusion: A majority (62%) of the students were not employed.

Question 11: "Is there anyone in your family who is attending or who attended this institution?"

Finding: Nine hundred and eighty-five or 80% of the students replied in the negative, while 245 or 20% of the students replied in the affirmative.

The total number of responses to this item was 1230.

Conclusion: The majority (80%) of the students stated that the members of their families had not, in the past or in the present, attended this institution.

Question 12: "From which of the following media sources have you heard about this institution?"

Finding: Remember that all students in the population could respond to each of the six response items so that the possible number of responses to any item would be a percentage of a total of 1230. For a check-all-items type of question, the sum of percentages may equal more than 100%.

Five response items, concerning the effectiveness of media sources, received the largest number of responses. The frequencies and percentages of student responses for these items have been rank ordered, from the highest frequency/percentage to the lowest, as follows:

catalog or brochure, obtaining 496 responses or 40%;
none, obtaining 381 responses or 31%;
newspapers, obtaining 274 responses or 22%;
radio, obtaining 253 responses or 21%; and
television, obtaining 104 responses or 8%.

Conclusion: A conclusion to this kind of check-all-items question must remain tentative; however, it would appear that (1) proportions of students had received communications through catalog-brochure [40%], newspapers [22%], radio [21%], and television [8%] and (2) a proportion [31%] had not received communication from media sources.

Question 13: "Give the approximate one-way distance from your home to the institution campus."

Finding: Three response items received the largest number of responses. The frequencies and percentages of student responses for these items have been rank ordered, from the highest frequency/percentage to the lowest, as follows:

1-5 miles, obtaining 338 responses or 27%;
6-10 miles, obtaining 305 responses or 25%; and
11-15 miles, obtaining 211 responses or 17%.

The total number of responses for this question was 1183.

Conclusion: A majority [52%] of students live within ten miles of the institution and the mean distance for one-way travel for each student would be approximately 12 miles.

Question 14: "If you attended this institution, would you use a car to drive to and from the campus?"

Finding: Eleven hundred or 89% of the students answered in the affirmative, while 130 students or 11% answered in the negative.

The total number of responses for this question was 1230.

Conclusion: A substantial majority [89%] of the students would use a car to drive to and from campus.

Question 15: "What is your opinion about this college?"

Finding: The responses were grouped under three items. The frequencies and percentages of student responses for these items have been rank ordered, from the highest frequency/percentage to the lowest, as follows:

no opinion, obtaining 770 responses or 63%;
I like it, obtaining 407 responses or 33%; and
I do not like it, obtaining 53 responses or 4%.

The total number of responses for this question was 1230.

Conclusion: A majority [63%] of the students hold no opinion concerning this institution.

Question 16: "Indicate which of the following most closely approximates your family's income per week."

Finding: Four income items received the largest number of student responses. The frequencies and percentages of student responses for these items have been rank ordered, from the highest frequency/percentage to the lowest, as follows:

\$100-\$149, obtaining 235 responses or 19%;
\$150-\$199, obtaining 208 responses or 17%;
\$200-\$249, obtaining 153 responses or 12%;
\$50-\$99, obtaining 113 responses or 9%.

The total number of responses for this question was 1078.

Conclusion: None.

Question 17: "If you continue your education beyond high school, who will bear the expense?"

Finding: Four items received the largest number of responses. The frequencies and percentages of student responses for these items have been rank ordered, from the highest frequency/percentage to the lowest, as follows:

student pays part and the parent pays rest, obtaining 391 responses or 32%;
 parents pay expenses, obtaining 373 responses or 30%;
 student will pay the expenses, obtaining 264 responses or 21%; and
 student will need a scholarship, obtaining 146 responses or 12%.

The total number of responses for this question was 1230.

Conclusion: By their responses, students revealed that they would bear the expense of post high school education in the following ways:
 (1) sharing the expenses with their parents, (2) having parents pay their expenses, (3) paying the expenses themselves, and
 (4) requesting scholarship funds.

Question 18: "Assuming that you might attend this institution, note on the separate enclosed sheet the educational programs available and then indicate your program preference."

Finding and

Conclusion: None. The data in regard to this question appear in the List Tally printout in Appendix C.

Question 19: "Place check mark(s) by the factor(s) that influenced the educational program choice you made in #18.

Finding: Remember that all students in the population could check each of the nine response items so that the possible number of responses to any item would be a percentage of a total of 1230. For a check-all-items type of question, the sum of percentages may equal more than 100%.

Four items received the largest number of responses. The frequency and percentages of student responses for these items have been rank ordered, from the highest frequency/percentage to the lowest, as follows:

personal interest influenced program choice, obtaining 739 responses or 60%;
 desire for a good job, obtaining 386 responses or 31%;
 students at the consortium institution, obtaining 141 responses or 11%;
 instructor at the high school, obtaining 129 responses or 10%.

Conclusion: A conclusion to this kind of check-all-items question must remain tentative; however, it would appear that students believed their own interests, desire for good jobs, and opinions of consortium institution students were factors which influenced program choice made in Question 18.

Question 20: "Check all the items you think describe the reputation of this institution."

Finding: Remember that all students in the population could check each of the seven response items so that the possible number of responses to any item could be a percentage of a total of 1230. For a check-all-items type of question, the sum of percentages may equal more than 100%.

Four items received the largest number of responses. The frequencies and percentages of student responses for these items have been rank ordered, from the highest frequency/percentage to the lowest, as follows:

"People think this institution is a good one," obtaining 804 responses or 65%;

"People think that this institution offers helpful, needed courses," obtaining 699 responses or 57%;

"People think the institution offers an inexpensive education," obtaining 631 responses or 51%; and

"People think instructors at the consortium institution are helpful to students," obtaining 416 responses or 34%.

Conclusion: A conclusion to this kind of check-all-items question must remain tentative; however, it would appear that students found the reputation of the institution to be a good one; the institution to offer helpful, needed courses; the institution to offer an inexpensive education; and the instructors to be helpful to students.

Question 21: "How long a program of training would you be willing to take if you thought that you would get a good job?"

Finding: Each of the "length of program" response items received a proportion of the student responses. The frequencies and percentages of student responses for these items have been rank ordered, from the highest frequency/percentage to the lowest, as follows:

more than two years, obtaining 531 responses or 43%;

up to two years, obtaining 409 responses or 33%;

up to twelve months, obtaining 202 responses or 16%; and

less than six months, obtaining 88 responses or 7%.

The total number of responses for this question was 1230.

Conclusion: The majority [76%] of the students would be willing to take programs up to and exceeding two years in length.

CRITICISM OF THE STRENGTHS AND WEAKNESSES OF THE STUDY

When the research coordinators were asked to criticize the study in terms of strengths and weaknesses, they commented upon the design of the study, the administration of the study, and the exclusion or modification of questions in the survey instrument.

Design of the Study

Concerning the design of the study, the research coordinators made the following remarks.

General criticism. The researchers commented as follows:

- At this point or until some expert tells us that our survey has problems, I feel that it has been a good "first effort."
- Before this work is considered final, we need to structure a procedure for the future studies we hope the institutes will conduct. If the institutes are unable to hire a person or release a person part-time to conduct research activities, these activities should be handled through student services. Before conclusion of our work, hopefully we will outline quite specifically who will handle future studies, the best time to conduct studies, and how these studies will be conducted. We need to give them in some tight outline every "how-to-step" along the way.
- The study helped to build contacts with the high schools.
- This study should be a continuing study conducted annually.
- Presented in a confusing format.

Line of questioning. The researchers commented as follows:

- First page provided valuable information for recruiting.
- Need to revise categories on occupations.
- Grade completed by both parents is unclear.
- Too many questions.
- Eliminate any questions that allow respondent to check more than one reply.

--Key educational background of parents/guardians upon graduation dates and degrees, i.e., high school, junior college or technical institute, senior college, master's degrees, and others.

--Ask for a response to out-of-school activities. In other words, how can we get to them in other places with information concerning community colleges and technical institutes.

Administration of the Study

Concerning the administration of the study, the research coordinators made the following remarks.

--The study questionnaires were administered in person, so there was almost a 100% return.

--A great deal of time was spent explaining at least one-half of the questions to the students.

--Administration to large groups was difficult in terms of obtaining good responses.

Exclusion or Modification of Questions in the Survey Instrument

Concerning specific questions in the instrument, the research coordinators made the following remarks.

Question 1. The researcher commented as follows:

--The question is too complicated and of questionable value for a survey of this type. A great deal of explanation was required and consumed a considerable amount of the allocated administration time. Even with good directions being given, many students asked for resolution of problems as to exactly what code to be recorded when the specific occupation could not be found. Since this was the first question, it may have set a poor atmosphere for the remainder of the questionnaire. Recommend elimination of this question.

Questions 6 & 7. The researcher commented as follows:

--To eliminate questions 6 and 7. Although I encouraged their inclusion, they are not giving us pertinent information.

Question 16. The researcher commented as follows:

--While the family income information may be interesting and while it might even be essential for some purposes, it is doubtful that the reliability of the responses is very high. Recommend elimination.

--Item on income was incomplete or incorrect in many cases.

Question 17. The researcher commented as follows:

--Item on finances needs revision.

Question 18. The researcher commented as follows:

--Item did not allow for enough possible choices.

Question 20. The researcher commented as follows:

--There are seven responses to indicate reputation of the institution. Five of them are favorable and only two are unfavorable. There should be an equal number of each category. This would permit a better statistical probability of discovering the level of acceptance of the institution as either "good" or "bad." Recommend revision of question.

SUMMARY

The consortium members have pledged to implement the results of the Report on the Survey of High School Students' Educational Plans and Opinions into their plans to meet the education/training needs of Appalachian communities in North Carolina.

To implement the results of this study, community college and technical institute personnel have engaged in the following activities.

1. Met with public school officials and counselors to discuss the implications of the study and to explore the avenues whereby education/training programs and recruitment efforts might be altered to improve the opportunities for post high school experiences of students.

2. Held meetings attended by administrators, faculty, students, and community representatives. The purposes of these meetings were (1) to seek ways to improve the images, as reported in this study, that community colleges and technical institutes have among high school students and (2) to evaluate student aspirations and make plans for modifying the two-year institutions' education/training programs.

3. Held research coordinators meetings. The purpose of these meetings was to develop from the high school students' educational plans and opinions, data elements that would, through comparisons with the results of other studies, have implications for immediate and long-range planning.

4. Held in Morganton, North Carolina, during August 3 and 4, 1972, a consortium conference attended by presidents, administrative staff, and faculty members of the consortium institutions and attended by junior college consultants, representatives of the American Association of Junior Colleges, and personnel from the North Carolina Department of Community Colleges and other governmental agencies. At this meeting consortium members joined with outside consultants and governmental officials to review the accomplishments of the high school image study and other consortium projects and to formulate, together, plans for consortium developments during the 1972-73 and 1973-74 years.

Consortium personnel hope that the Report on the Survey of High School Students Educational Plans and Opinions has been meaningful to all persons in higher education and to administrators and counselors in public high schools.

The presidents of the consortium institutions and the public school officials, mentioned in the Acknowledgment section of the report, would appreciate receiving the readers comments and suggestions regarding the high school image study.

Appendix B

HIGH SCHOOL STUDENTS' **EDUCATIONAL PLANS AND OPINIONS**

Relating to the Area
COMMUNITY COLLEGE AND/OR TECHNICAL INSTITUTE

Dear Student:

_____ is an "open-door" two-year institution serving the educational needs of this area. This questionnaire has two purposes: (1) finding out what kind of image this institution has with high school juniors and seniors and (2) getting information on your background and educational plans. Your cooperation in completing this survey form is appreciated. All responses will be treated confidentially. Thank you.

DIRECTIONS

1. In those instances, where the question requests a written statement, please print.
2. Where you are directed to make a check mark, please do so firmly and neatly.
3. Do not fill in sections reserved for codes.

PERSONAL INFORMATION

YOUR NAME _____
(last name) (first name) (middle initial)

NAME OF HIGH SCHOOL _____
(code)

COUNTY _____
(code)

GRADE: Junior _____ 11
Senior _____ 12

SEX: Male _____ 1
Female _____ 2

AGE: _____

HOME ADDRESS AND PHONE

(street address or route & box number) (city)

(state) (code) (zip) (phone)

EDUCATIONAL INFORMATION

Use the scale listed below and then indicate the highest grade completed by your parents or guardian.

1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20

Father _____

Mother _____

Guardian _____

What do you plan to do immediately after you finish high school?

Enter a two-year college or technical _____ 1 Get a job _____ 4
institute

Enter a four-year college or university _____ 2 Become a housewife _____ 5

Enter military service _____ 3 Undecided _____ 6

Other: _____ 7
